## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments with respect to claims 1-22 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 8 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Haley PN 5,884,036.

In regards to claims 1 and 8: Haley teaches a method comprising: performing a topology discovery of fundamental path elements of a cluster, including path links (Abstract); receiving a request from a client for information on the properties of the fundamental path elements of a path (topology information request), the request identifying at least a source and destination of the path; and sending to the client based on the request, the response providing the information on the properties for the fundamental path elements of the path, including one or more links between the source and destination (abstract).

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2189

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Spiegel et al PN 5,649,108 in view of Haley PN 5,884,036.

In regards to claims 1, 8 and 15-16: Spiegel et al teaches a method comprising:  
performing a topology discovery of a cluster that includes a plurality of ports (mapping);  
identifying all possible paths to each port from any other port (map); receiving a request from a client, (source) the request identifying a source and a destination of a path (Column 2 lines 39-41, 62-64 and Column 3 lines 31-36 and 62-67); and sending a response to the client based upon the request, the response identifying one or more links and switches between the source and the destination (Column 2 lines 39-41, 62-64 and Column 3 lines 31-36 and 62-67). Spiegel teaches the switches being ATM fabric switches. Spiegel et al does not expressly teach the requests including a request for information on the properties of the fundamental path element of a path. Haley teaches receiving a request from a client for information on the properties of the fundamental path elements of a path (topology information request). It would have been obvious to include a topology information request in the system of Spiegel et al because this would have allowed for quick network topology determination.

In response to claims 2, 11 and 17: Spiegel et al teaches selecting an alternate route.

In response to claims 3-4, 12-13 and 18-19: Spiegel et al teaches using the alternate route.

In response to claims 5, 10 and 20: Both Spiegel et al and Haley teach including Hop count and QOS.

Art Unit: 2189

In response to claims 6 and 21: Spiegel et al teaches the use of Virtual ID's.

In response to claims 7, 14 and 22: Spiegel et al teaches identifying the order the links are traversed (figures 6).

In response to claim 9: Spiegel et al teaches the source being a host.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a).

Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
